CLIENT BRIEF / DELIVERY COMPOSER

Media and Broadcast Platform Recovery

REFERENCE SYN-MED-003
SECTOR Media and broadcast
CLASSIFICATION Synthetic demo data only

ENGAGEMENT REQUIREMENT

A media and broadcast provider needs a three-person team to recover a delayed cloud platform programme before a major live-event season. The work covers cloud transformation, platform engineering, Terraform infrastructure as code, service recovery, incident response, and security operations. Required roles are delivery leadership, cloud engineering, and security consulting. Baseline clearance is sufficient and the team must be available by 2026-10-05. The client needs an executable recovery plan, observable controls, and evidence for every proposed consultant.

Evaluation instruction

Use recorded constraints before semantic relevance. Show the evidence for each proposed consultant and leave the final decision with a human delivery leader.

NOT A REAL CLIENT DOCUMENT
