CLIENT BRIEF / DELIVERY COMPOSER

Critical Infrastructure Cyber Resilience

REFERENCE SYN-CNI-001
SECTOR Critical infrastructure and public sector
CLASSIFICATION Synthetic demo data only

ENGAGEMENT REQUIREMENT

A national critical infrastructure operator needs a three-person delivery team to recover its cyber resilience program. The team must define a zero trust architecture, modernize the cloud control plane, establish data governance, and introduce AI-assisted security operations with evidence-led threat detection. Required roles are delivery leadership, security architecture, and data and AI engineering. All consultants must hold SC clearance and be available by 2026-09-07. The client expects a practical discovery followed by implementation, clear accountability, and verified profile evidence.

Evaluation instruction

Use recorded constraints before semantic relevance. Show the evidence for each proposed consultant and leave the final decision with a human delivery leader.

NOT A REAL CLIENT DOCUMENT
